DETAILED ACTION

Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance:

Examiner respectfully disagrees with Applicants' assertion that Gholmieh does not teach the feature of establishing, by the mobile station, a headroom value based on the communication channel variance condition. Gholmieh, for the same reasons set forth in the Office Actions dated August 22, 2007 and July 16, 2008, teaches this feature. The term "communication channel variance" is a broad term, which reads on a variety of changes to a communication channel such as changes in the quality of the channel or link. It is very well established in the art that closed-loop power control comprises adjusting the power in response to a change in link quality such as a change in the signal-to-interference ratio (SIR). Gholmieh, thus, reads on the limitation in question. Gholmieh further teaches establishing a headroom value based on the communication channel variance condition. The headroom value changes in response to the power control commands (See Section 0009 of Gholmieh). The power control commands are sent as a result of the change in the channel or link quality thus the headroom value changes ultimately in response to the change in the channel or link quality.

Examiner respectfully disagrees with Applicants' assertion that Examiner acknowledges that Gholmieh does not teach determining, by the mobile station, a communication channel variance condition on Page 4 of the Office Actions dated

January 2, 2009 and June 15, 2009.. Page 4 of the Office Actions dated January 2, 2009 and June 15, 2009 actually reads “Gholmieh does not teach determining, by the mobile station, a communication channel variance condition, **wherein the communication channel variance condition is at least one of a primary pilot power variance, fading period and fade depth estimate, or a peak-to-average estimate within an adaptive measurement interval.**”

While the prior art of record teaches the establishing of a headroom value based on the communication channel variance condition the prior art of record fails to teach or render obvious establishing a headroom value based on the communication channel variance condition, **wherein the communication channel variance condition is at least one of a primary pilot power variance, fading period and fade depth estimate, or a peak-to-average estimate within an adaptive measurement interval.**

Claims 1, 12, 16, and their corresponding dependent claims are therefore allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
